הנדון: תשובות לשאלות הבהרה עבור בקשה לקבלת מידע (RFI) בנושא מערכות הצפה עירוניות

להלן ריכוז שאלות ותשובות ההבהרה בהקשר למכרז הנ"ל:

תשובה	שאלה	מס"ד
<p>In Israel, the urban drainage systems are separated from the sanitary sewer systems. The Water Authority has several measurement instruments installed at river cross sections within urban areas or that drain urban areas, but not inside the urban drainage systems.</p> <p>In the RFI framework, we are interested to be familiarized with forecasting, and not measurement, technologies, and there is no need to suggest particular partners. However, there is no prevention to suggest technologies, the application of which involve a third body partner.</p>	<p>Do you have sensors for water level, rainfall and water volumes measurements installed in the urban sanitary sewer which collects storm water? If not, are you interested, in the RFI framework, for us to suggest international partners?</p>	1
<p>In case of a future tender procedure for a pluvial flood forecasting system, there is no prevention for it to be open to international providers, according to the needs of the authority.</p>	<p>I note that the RFI requests for a detailed document that requires a considerable effort to prepare. Before we engage in such an effort, I would like to for you to clarify whether the future project will be open to international providers.</p>	2
<p>Please answer the questions and follow the instructions detailed in the published RFI in the following link: https://mr.gov.il/ilgstorefront/he/p/a</p>	<p>I'm interested in providing info about our product on pluvial flooding in urban areas, can you provide some info on how to do it?</p>	3

<p>ttachment/005056BFAF4C1EEE91 FA40996FE9F2DD/%D7%97%D7 %95%D7%91%D7%A8%D7%AA %20%D7%94%D7%9E%D7%9B %D7%A8%D7%96. You may send the required information to Michrazim@water.gov.il no later than February 15th 2024, 12:00 noon Israeli time.</p>
